The Steel Shop - Raising Productivity

Challenging project not a problem for skilled craftsmen.

Athens, Tennessee – The Steel Shop, a turnkey design and build company specializing in steel fabrication – was called on by E & E Manufacturing to reengineer a portion of their plant.

An 80 by 120-foot section of the plant had to be cleared to make room for the installation of a press. The Steel Shop's skilled craftsmen then had to remove an existing building column and reinforce the roof to make way for the heavy machinery needed to construct the press pit and install the press.

Not only did they successfully complete that project but they also designed, fabricated and installed a mezzanine for the press controls and electrical service lines.

The company's in-house staff of engineers designed and built an addition to the plant that included the installation of columns and a roof truss system. The 15-month project was completed on time and within budget.

The Steel Shop maintains an in-house staff of quality and dedicated Professional Licensed Engineers, Certified Welders and a fully staffed and equipped fabrication shop that includes steel sheers, press brakes, pipe benders, and more. As a turnkey supplier, the company controls all aspects of the construction process from the anchor bolts up.

The Steel Shop has offices located in Michigan, Alabama, and Kentucky enabling them to serve clients with a continuity of service regardless of where new business expansions might take them within the continental United States.
